

CX4 – Felt Roller for low viscosity coatings

Product description

The CX4 roller is specifically designed for the application of low-viscosity coatings, such topcoats. Featuring Superior HiCap Felt technology, the roller utilizes endless filament fibres made from polyester. The Polyester fibres are designed to provide a superior aesthetic and uniform coating finish.

Features and benefits

- No cleaning or taping of roller needed.
- No shedding of fibres reduces need for costly rework.
- Excellent aesthetic and uniform coating finish
- Optimized for high-viscosity coatings, making it ideal for two component primers.
- Thermobonded fabric enhances durability and provides exceptional resistance to strong solvents.
- Ideally suited for dipping in thinner and make smooth finish on Epoxy Passive Fire Protection (PFP).

Typical WFT thickness

Topcoats: 100 - 125 microns.

Coatings compatibility

- Polysiloxane
- Polyurethane
- Alkyds
- Acrylic
- Zinc primers
- Epoxy PFP (finish only)

Size	Product nr
10 cm	400010
18 cm	400018
